CHINMAYI THAKUR

Data Scientist
London, UK • chinmayithakur0@gmail.com

PROFESSIONAL SUMMARY

MSc Data Science candidate (Queen Mary University of London) with 1+ year of experience in data-driven decision-making, partner strategy, and operational optimisation. Passionate about e-commerce and content-driven business models. Proven ability to derive actionable insights from complex datasets, build scalable frameworks, and communicate findings clearly to cross-functional stakeholders.

CORE COMPETENCIES

Data & Analytics: Python (Pandas, Scikit-learn, NumPy, Seaborn) · SQL (CTEs, Window Functions) · Power BI · Excel (Advanced)

E-Commerce & Strategy: Category Operations · Partner Segmentation · Product Selection Strategy · Content Strategy · SOP Optimisation · Root Cause Analysis

Soft Skills: Cross-functional Collaboration · Structured Problem-Solving · Data Storytelling · Playbook Development · Proactive Self-Starter

EXPERIENCE

Sales Assistant | Superdrug, London *Nov 2025 – Present*

- Applied structured product categorisation (pharmacy, skincare, cosmetics) to advise 100+ customers weekly — developing intuition for product selection and consumer preferences analogous to e-commerce merchandising.
- Maintained zero-discrepancy records across cash, card, and inventory systems over 3 consecutive months, demonstrating operational accuracy at scale.
- Produced end-of-shift reconciliation reports consistently meeting store accuracy standards, building habit of data integrity and documentation.

Data Science Intern | CodSoft *Jun 2024 – Aug 2024*

- Processed and structured 20,000+ data records using Python (Pandas, Scikit-learn), applying classification frameworks to produce clean, analysis-ready datasets — directly applicable to partner segment analysis.
- Identified inconsistencies across 5 project datasets and resolved them, improving model efficiency by 35% through systematic feature selection and hyperparameter tuning; a root-cause analysis approach transferable to category-level SOP optimisation.
- Built classification models achieving up to 98% accuracy; documented all workflows in Google Colab, enabling reproducibility across a 3-person team — mirroring playbook development for partner enablement.
- Delivered visual reports to technical and non-technical stakeholders via Matplotlib and Seaborn, accelerating decision-making by ~2 days per sprint cycle.

RELEVANT PROJECTS

Customer Churn Prediction — E-Commerce Strategy Simulation | *2024*

- Extracted and joined data across a 50,000+ row relational database using SQL (CTEs, window functions) to engineer 15 behavioural features, closely mirroring real-world partner and user segmentation tasks.
- Trained and evaluated Logistic Regression, Random Forest, and XGBoost classifiers; selected optimal model achieving 91% accuracy. Delivered tiered risk outputs (High / Medium / Low) consumed by BI team for targeted retention campaigns — analogous to designing tailored partner growth strategies.

NLP Text Classification — Customer Support Operations | *2024*

- Categorised 10,000+ customer support tickets into 8 predefined classes, improving category agreement rate from 78% to 94% — a structured approach to scalable operations and SOP refinement.
- Used SQL to audit data quality across batches, flagging edge cases and iteratively refining the classification framework; documented all definitions for team reuse, demonstrating best-practice playbook thinking.

Retail Sales Data Cleaning & EDA | *2023*

- Cleaned and transformed a 20,000+ row retail transactions dataset, uncovering a 15% sales uplift during festive seasons — the kind of product-and-timing insight directly applicable to e-commerce content and promotion strategies.

- Documented the full EDA process in a Google Colab notebook adopted as the team standard template, building a reusable, scalable asset.

EDUCATION

MSc Data Science | Queen Mary University of London *Sep 2025 – 2026*

Modules: Machine Learning, Data Mining, Statistical Modelling, Big Data Technologies, Research Methods

BSc Information Technology | BK Birla College, India *2022 – 2025*

Modules: Python, Java, Data Structures, Database Management Systems, Web Technologies

VOLUNTEERING & LEADERSHIP

NSS Volunteer | National Service Scheme, India *2022 – 2024*

- Facilitated literacy workshops for 50+ adults using structured lesson plans and tracked comprehension outcomes across sessions — demonstrating ability to design and evaluate structured programmes at scale.
- Led health awareness drives engaging 300+ residents and organised 3 blood donation camps mobilising 200+ donors, showing community-level cross-functional coordination.
